

Footprint for 1-wire memory  
of type DS28E05R+

Unconnected pads used for prototyping

Please note the following about the Crazyflie expansion connectors:  
 \* VCOM is always on power directly from the battery/USB and is not regulated  
 \* VCC is only on when the system is on and is regulated to 3V  
 \* VUSB is connected directly to the USB which means this will supply at 4.5-5.5V when the USB is connected and can be used for charging the battery when the USB is not connected
